COUNTRY USSR(Ukrainian SSR) DATE DISTR.

18 February 1952

Power Plant at Krasni Luch SUBJECT

NO, OF PAGES

25X1C

NO. OF ENCLS.

SUPPLEMENT TO REPORT NO.

25X1X

#### 1. Location :

About 6 km southwest of Krasni Luch (38°56'E/ 48°03'N), Ukrainian SSR, northeast of the reservoir of the Mius River.

## Plant installations:

Soviets said that the plant, an old installation constructed in 1936, was partially dismantled and then blasted when German troops approached in World War II. Its reconstruction started in 1945 and enlargements were still under way at the time of observation. For plant layout see Annex 1. For sketch of the boiler and turbine house see Annex 2. Three turbines are in operation. A railroad connection is available.

# 3. Work force :

including 120 PWs doing construca. Four hundre tion work; one

with 200 civilian laborers, operating b. Three shif the plant.

### Capacity:

CONFIDENTIA L/CONTROL/US OFFICIALS	s only	4
ONTRAL INTELLIGENCE AGENCY		25X1A

power to the entire Krasni Luch area (according to a Soviet construction foreman).

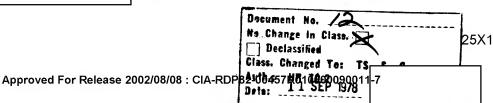

25X1A

a. The replant near Krasni Luch has been repeated to plant location in the information is appeared to the plant is exactly 5 km southwest of the plant railroad station, in an angle formed by the small reservoir of the Mius River.

- b. The report is of special value because:
- (1) A comparison with available records on the plant shows that the best reproduction of the plant layout to date; is forwarded as Annex 1 of this report.
- (2) Essential postwar emlargements of the plant mentioned by a previous source \*, are confirmed. The enlargements of the boiler and turbine house, northeast of the old building, and the construction of a new and still larger building seems to be correct. This new construction was mentioned in a previous report to have passed the phase of surveying work. The intended installation of 16 boilers in this new building is doubted. It is assumed that the installation of both boilers and turbines is conbuilding will be an independent powdimensions. The plant capacity would creased by the operation of this new ever, needs clarification.
- (3) A previous report \*, mentioned only the number of boilers but not the turbines. The statements of the present report and the details recorded in Annex 2 are presumably correct.
- (4) It is believed to be a fact that the water from the reservoir is supplied to the plant via underground installations as is also indicated by the omission of above-ground installations on the attached sketch. Previous different information seems to be in error.
- c. The direction of the river has to be turned 130 degrees on the previous report \*. The river is not a tributary of the Mius River but the Mius itself.
- d. Except for the newest constructions, the target data on the plant are sufficiently clarified.
